DPUDistance

Computes the Euclidean distance between two points. The computation is made in 2 dimensions that are on one plane.

1. Inputs:

X1, Y1	Coordinates of 1st point.
X2, Y2	Coordinates of 2nd point.

2. Outputs:

Distance	Distance of points.

3. Dependencies on other DPUs:

There are no dependencies on other DPUs.

4. Example:

This will give you the distance roughly square root of 2.

```
DPUDistance PointDistance
{
	Computer = { LOCALHOST };
	Index = 1;
	X1 = 0;
	Y1 = 0;
	X2 = 1;
	Y2 = 1;
};
```

This will give you the distance 5.

```
DPUDistance PointDistance
{
	Computer = { LOCALHOST };
	Index = 1;
	X1 = 13;
	Y1 = 29;
	X2 = 16;
	Y2 = 25;
};
```
