

DPUKeyDX8Joystick

Simulation of a Microsoft DirectX 8.0 compatible joystick via keyboard.

1. Inputs:

AcceptWASD

Should the WASD-keys also be considered as throttle/brake (y) and steering wheel (rotz)? Default: false

2. Outputs:

x

Value of simulated joystick in X-direction (normally left/right) between -1 (left) and +1 (right)

y

Value of simulated joystick in Y-direction (normally up/down) between -1 (down) and +1 (up)

z

Value of simulated joystick in Z-direction (often the throttle control) between -1 (down) and +1 (up).

rotx

Value of roation of simulated joystick around the X-axis.

roty

Value of roation of simulated joystick around the Y-axis.

rotz

Value of roation of simulated joystick around the Z-axis.

Up

boolean output for foward movement

Down

boolean output for backward movement

Left

boolean output for movement, direction left

Right

boolean output for movement, direction right

Button[1...20]

State of buttons

Slider[1...2]

Non-normalized value of sliders

Pov[1...4]

Position of Coolie-hats (point-of-view hats) in degrees times 100.

Pov[1...4]N

boolean output, if the direction of the respective Coolie-hat points to north.

Pov[1...4]NW

boolean output, if the direction of the respective Coolie-hat points to north-west.

Pov[1...4]W

boolean output, if the direction of the respective Coolie-hat points to west.

Pov[1...4]SW

boolean output, if the direction of the respective Coolie-hat points to south-west.

Pov[1...4]S

boolean output, if the direction of the respective Coolie-hat points to south.

Pov[1...4]SO

boolean output, if the direction of the respective Coolie-hat points to south-east.

Pov[1...4]O

boolean output, if the direction of the respective Coolie-hat points to east.

Pov[1...4]NO

boolean output, if the direction of the respective Coolie-hat points to north-east.

3. Functional principle:

DPUKeyDX8Joystick simulates a joystick control via keyboard. Concerning the out-puts, it is totally compatible with DPUDX8Joystick. The operation of the simulated joystick is done by using the following keys:

Key	Function
↑	Forward
↓	Backward
←	Left
→	Right
Shift + ←	Z-rotation counterclockwise
Shift + →	Z-rotation clockwise
Ctrl oder 1	Button 1
2 ... 8	Button 2 ... Button 8
Page up/down	Slider
