

DPUMOPSGE

DPUMOPSGE presents pedestrians graphically in the simulation environment and animates them. This DPU is intended for usage together with the visualization SGE, which additionally requires DPUSGEWorld and DPUSGEView.

The simulation data is received from DPUMOV or DPUMOVClient respectively.

1. Dependencies to other DPUs:

In addition to DPUMOPSGE, DPUMOV or DPUMOVClient must run on the graphics computer. Besides, DPUSGEWorld is required for the visualization. Please make sure that a higher Index is assigned to DPUMOPSGE than to its dependencies.

The complete setup for the pedestrian simulation is described in DPUMOV's documentation.
