

DPUMediaPlayer

Playback of a multimedia file. Can be used for any audio or video file that can be played back with the Windows Media Player.

1. Inputs:

<i>Start</i>	Changing the value from <i>false</i> to <i>true</i> starts playback. If the file is currently played back it will be restarted from the beginning.
<i>Stop</i>	Changing the value from <i>false</i> to <i>true</i> stops playback.
<i>Pause</i>	Pauses playback if set to <i>true</i> . Continues playback when set to <i>false</i> again.
<i>Loop</i>	Should playback automatically restart when reaching the end of file? (default: <i>false</i>)

2. Dynamic parameters for audio:

<i>Volume</i>	Defines the volume of the playback. Valid values range between 0 (silent) to 1 (full volume). (default: 1)
<i>Speed</i>	Defines the speed of the playback as multiple of the original speed range between 0.1 to 16. (default: 1) Important: Unwanted side effects might occur when using this parameter with video files (for example audio playback is faster than video playback). Pitch is affected when changing the playback speed.

3. Dynamic parameters for video:

<i>Fullscreen</i>	Show video fullscreen (<i>true</i>) or windowed (<i>false</i>)? (default: <i>false</i>)
<i>TitleBar</i>	Show title bar when windowed? (default: <i>true</i>)
<i>WindowX, WindowY</i>	Position of the upper left corner of the video when windowed.
<i>WindowW, WindowH</i>	Size of the video when windowed.

4. Static parameters:

<i>MediaFile</i>	Filename of the media file to play. If no absolute path is given the file is searched below the project folder and the SILAB installation path. It is also possible to point to an URL (for example "http://www.wivw.de/video/city.avi"). In this case the file is downloaded during the ReadyToStart phase and cached for use.
<i>Preload</i>	Preload some data on ReadyToStart? (default: <i>true</i>)

5. Outputs:

<i>Playing</i>	Is a playback running (<i>true</i>) or not (<i>false</i>).

SILAB DRIVING SIMULATION

version Version 7.1 documentation

6. Dependencies:

It may be necessary to install additional codecs (for DirectShow) to play back certain video or audio files.
