

DPUMinMax

Computation of minimum/maximum.

1. Inputs:

In[1...10]

Input values. *In*1 is the first input value.

2. Dynamic parameters:

Min

= 1: *Out* = min(*In*1, ..., *In*10) is computed

= 0: *Out* = max(*In*1, ..., *In*10) is computed

3. Outputs:

Out

Minimum/maximum of input values (dependent on *Min*)
