

DPUSGELightParams

Sets additional parameters for the lighting model of SILAB's graphics engine SGE.

1. Dynamic parameters:

<i>HeadR</i>	Red part of the head light's color (0..1). Default: 1
<i>HeadG</i>	Green part of the head light's color (0..1). Default: 1
<i>HeadB</i>	Blue part of the head light's color (0..1). Default: 1
<i>HeadHalfDist</i>	Distance (in meters) in which the head light's brightness drops to a half of its value. Default: 50
<i>HeadCloseIntensity</i>	Intensity (0..1) of the undirected headlamp light immediately around the vehicle. Default: 0.3
<i>HeadCloseHalfDist</i>	Distance (in meters) in which the undirected headlamp light drops to a half of its value. Default: 3
<i>ShadowMaxDist</i>	Approximately half of the distance (in meters) up to which shadows of objects are visible. Higher values lead to coarser shadow borders, however this effect can be countered by also increasing the resolution of the shadow maps (see parameter <i>ShadowQuality</i> of <i>DPUSGEWorld</i>). Default: 250
<i>Head0X</i> <i>Head0Y</i> <i>Head0Z</i>	Position of the left headlamp, relative to the EGO vehicle's centroid position. Default: (1.0, -0.65, 0.7)
<i>Head1X</i> <i>Head1Y</i> <i>Head1Z</i>	Position of the right headlamp, relative to the EGO vehicle's centroid position. Default: (1.0, 0.65, 0.7)

2. Dependencies to other DPUs:

The **DPUSGELightParams** must be run together with *DPUSGEWorld* and *DPUSGEView*. The Index value of *DPUSGELightParams* must be higher than *DPUSGEWorld*'s Index.
