

DPUSNDXVstSource

Includes a virtual instrument available as a VST plugin to the sound simulation. (More details to the VST standard and VST instruments can be found at <http://www.steinberg.net/en/products/vst.html>)

DPUSNDXVstSource uses OpenAL for sound playback and works fine with other SNDX-DPUs, for example *DPUSNDXWavPlayer* and *DPUTRFSNDX*.

1. Inputs:

<i>Program</i>	Choose program of the VST instrument
<i>Note</i>	MIDI note to play (0 for none).
<i>Velocity</i>	Attack of the note to play. Value range (according to the MIDI norm) 0 .. 127.

2. Inputs for 3D positioning:

<i>X, Y, Z</i>	Position of the sound source relative to the listener
<i>vX, vY, vZ</i>	Velocity of the sound source relative to the listener

3. Parameter:

<i>Effect</i>	Filename of the VST-DLL. The extension „.dll“ should not be added. The file is searched in the project path and in \SILAB\lib\sounds\effects Example: "Synth1" loads \SILAB\lib\sounds\effects\Synth1.dll.
---------------	--

4. Outputs:

<i>ProgramName</i>	Name of the chosen program
--------------------	----------------------------

Note: Additional inputs and outputs are created according to the parameters of the loaded VST instrument.
